Restaurant Scheduler - Design Walk-Through: Board Photo + Example Table

1.

2.

Step	Which box does the work?	What moves on the arrow?	What's missing?
1. The manager enters 8 employees, their availability, and Saturday's needs.	Manager input/manager app	Employee information, availability, roles, operating hours, staffing requirements	Nothing major missing; clarify the arrow to the Database.
2. The schedule builder makes a schedule, and it is posted.	Server / Schedule Builder / Manager Preview	Scheduling information, generated schedule	Schedule Builder logic and an arrow showing how the schedule is saved and posted.
3. Employees check their shifts for the week.	Manager App / Manager Preview	Published schedule	Employee View is outside our current scope. Manager handles schedule distribution.
4. Saturday at 2 PM, the cook calls out 3 hours into an 8-hour shift.	Manager App / Server	Call-out information, employee ID, remaining 5 hours	Manager call-out input and arrow to the Server.
5. The system finds a replacement for the last 5 hours. The manager approves it.	Server / Schedule Builder / Manager Preview	Replacement information, updated schedule, manager approval	Approval arrow back to Server and updated schedule saved to Database.
6. The replacement cook is told about the new shift.	Manager App / Manager Preview	Approved schedule change and replacement details	Employee notification is outside current scope; manager communicates the change.
